

## **TTDC Starts Cloud-Based GISMO Simulation System Service** **– Provision of New Model-Based Development Style –**

In January 2022, Toyota Technical Development Corporation (TTDC, Head Office: Toyota, Aichi, President: Yoshiyuki Kagawa) debuted a service featuring its new GISMO cloud-based simulation system. GISMO enables location-free integrated development to help resolve a wide range of issues raised by the promotion of digitalization in the vehicle development process, including the protection of intellectual property rights, insufficient specialist knowledge related to connecting different models, and differences in tool environments.

GISMO combines the convenience of cloud computing with technology that connects TTDC's unique development models, thereby enabling integrated development in a virtual environment while protecting the intellectual property of the models

Current issues	How GISMO resolves these issues
Protection of intellectual property rights	GISMO only shares the simulation results without handing over the models.
Insufficient specialist knowledge outside own field	GISMO enables integrated development with specialist engineers in other fields.
Differences in tool environments	GISMO can be connected to different environments.

### The GISMO simulation system

**GISMO enables integrated development at multiple locations.**
