

TTDC Employee Selected as an AWS Community Builder **-Recognized for sharing expertise and regularly providing insights on AWS-**

Toyota Technical Development Corporation (TTDC, Head Office: Toyota, Aichi, President: Yoshiyuki Kagawa) is pleased to announce that Yuichi Sato of the Platform Development Department (department name as of the time of selection) has become the first TTDC employee to be selected as a Community Builder in the global AWS Community Builders program offered by Amazon Web Services (AWS).

Mr. Sato has been consolidating the knowledge he gained from using of AWS in development and operations in his own words, and regularly sharing it publicly through technical articles and communication with the community. We believe he was selected in recognition of his efforts to turn what he learned through practical experience into learning opportunities for others. TTDC views this as the fruit of one man's commitment to engaging with technology reaching audiences beyond the company, and will continue to encourage the sharing and information and mutual learning involving technology.

What is AWS Community Builders?

AWS Community Builders is a global program that invites and supports people who write, speak, or participate in community activities to share their knowledge or actual use insights on AWS while also fostering connections between users of that technology. Members are granted opportunities to access the latest AWS information and network with other community builders around the world, in an environment that makes it easy for them to share information and take on new challenges.

Comment from the selected member

"I am greatly honored to have been selected as an AWS Community Builder. I have been sharing my own learning and insights in my own words for some time now, in the hope that it might help someone else on their journey. Being selected makes me even more motivated to keep on enjoying learning, sharing my knowledge with colleagues and the public, and expanding the circle of mutual learning around me.

In that vein, TTDC will maintain its commitment to creating an environment that empowers all employees to continuously learn and share the knowledge they gain for the benefit of both the company and the broader community. We will strengthen the technological capability and nurture the talent, that form the pillars of the future of mobility even as we focus on broadening the virtuous cycle in which technology drives personal growth, and tackling challenges creates new value.
